Appendix A – Preliminary Identified WSDP Projects

#### **EXECUTIVE SUMMARY**

The Water Services Authority (WSA) is tasked with the preparation of a formal water services development plan (WSDP) that contains information on the physical attributes of the area, the socio-economic attributes, existing infrastructure and water use, and provides a long-term water services plan with a five-year implementation plan.

The WSDP is part of the Integrated Development Plan (IDP) of a WSA, and should be prepared as part of the IDP preparation process.

This report gives an overview of the following:

- Background;
- Objectives;
- Scope of the Study;
- Methodology; and
- Conclusions

The key outcomes of the Water Services Development Plan report forms part of the Mangaung Bulk Water Augmentation Programme (MBWaP) as it influences and informs the short-, medium-, and long-term planning of Bloemfontein's water sources and distribution. The main activities and progress with regards to the five-year WSDP process will be addressed in the report.

# List of Abbreviations

MBWaP	Mangaung Bulk Water Augmentation Programme
MMM	Mangaung Metropolitan Municipality
WCDM	Water Conservation Demand
WSDP	Water Services Development Plan
WSA	Water Services Authority

### 1. INTRODUCTION

#### 1.1 Background

In terms of Section 11 of the Water Services Act 1997, all Water Services Authorities (WSAs) have a duty to progressively provide efficient, affordable, economical and sustainable access to water services. For this purpose, water services include both water supply and sanitation provision. To assist in the implementation of this duty, the WSA is also tasked with the preparation of a formal water services development plan (WSDP) that contains information on the physical attributes of the area, the socio-economic attributes, existing infrastructure and water use, and provides a long-term water services plan with a five-year implementation plan.

The WSDP is part of the Integrated Development Plan (IDP) of a WSA, and should be prepared as part of the IDP preparation process. The IDP is developed for every elected municipal council for their 5 year term. The current five year period is 2017-2022 and the submission of the WSDP report will thus require continuous revision and updating across this period.

#### 1.2 Objectives

The main objective of the WSDP process is to fill the gap between where we are now (*status quo*) and where we want to be in the future. The key targets of the plan are thus to:

- Ensure the future provision of basic and higher levels of appropriate, affordable and sustainable water services whilst addressing the issue of free basic water and sanitation to indigent customers.
- Ensure that water resources are protected and sustainably managed.
- Ensure that the water services infrastructure and service are properly managed and maintained through appropriate institutional arrangements.

#### 1.3 Scope of the Study

The Department of Water and Sanitation have developed guidelines, and a web-based system for all WSAs to utilise in the development of WSDPs. This system provides a standardised format for capturing water services information on a spatial geodatabase, as well as assessing, strategizing, as well as detailing the planned water services projects.

The system has been in use since 2010 but changes to the system were initiated in 2016. The system still works on an underlying geodatabase, and data from the previous system was carried through to the new system.

The water and sewer Master Plans are the base planning documents for the WSDP. All the data, plans, strategies and projects gathered during the Master Plan tasks are uploaded into the DWS online WSDP System. The structure of the Master Plan is such that it is in full alignment with the DWS WSDP requirements, and will form the basis of the WSDP.

Master Planning in terms of water and sanitation services for Mangaung Metropolitan Municipality was previously executed for Bloemfontein and hence does not farm part of the immediate scope of the WSDP process but the outcomes of the respective masterplans were utilised to inform the project planning process of the WSDP.

One of the key shortcomings identified is that Master Planning documents have only been prepared for Bloemfontein (sewer and water) and Thaba Nchu (water), neglecting future planning for Botshabelo, Wepener, Dewetsdorp, Vanstadensrus and Soutpan. In order for the entire Municipality's planning to be confirmative across the various towns/entities, the Master Planning for these towns have been identified as a gap which should ideally be addressed as part of the five-year WSDP process. Master Planning for these towns have thus been listed as separate projects which MMM will need to incorporate as part of their planning.

In addition to all of the tasks that form part of the master planning process, the DWS WSDP system requires:

- An assessment of <u>each data element</u> in terms of quality and quantity of data. There are a vast number of such data elements to assess, and the limiting factor is the speed of the DWS system in opening each field, and saving each field.
- 2. The development of five year strategies to close the gaps identified. The master planning process identifies projects and priorities for 5, 10 and 15 year horizon. In order to complete the WSDP, the first 5 years' worth of projects need to be unpacked further, with objectives, KPIs and annual targets to be set for each of the business areas.

The development of strategies and the setting of objectives, KPI's and annual targets is a process which will require continuous refinement and development. In order to initialise the process a draft list of all MMM's identified current and future projects is included in Annexure A. The projects contained in Annexure A merely focuses on the identified projects as extracted from several planning documents available and does not address the prioritisation in terms of the 5, 10, and 15 year horizon as this will be addressed as a further phase to the WSDP.

# 1.4 Methodology

The approach in initiating this WSDP five-year process, subject to further development and refinement, is thus as follows:

- As the scope of the study was merely at desktop level all information pertaining to all sectors of WSDP planning which could supplement the process of completing and verifying the captured water services information on the spatial geodatabase had to be obtained. This included all existing Master Planning documentation, Water Conservation and Demand Management (WCDM) Strategies, existing water balances, Geographic Information System (GIS) data regarding all water services infrastructure, asset management registers and condition assessment reports where available.
- 2. The validity of the collected data had to be verified parallel to the review of the information previously uploaded on the spatial geodatabase. Based on the available data obtained the spatial geodatabase was updated and revised where new information was available. The updated spatial geodatabase was then submitted to the data custodian for review and mass uploading onto the web-based WSDP.
- 3. In addition to this identified projects also had to be updated on the projects geodatabase with information pertaining to cost, demand horizons, intervention horizons, problem definition, strategic importance and a vast amount of additional fields requiring assessment. In terms of completing the projects geodatabase the planning is very limited to projects where formal

funding was already assigned- this implies that several projects have been identified but can't be included as part of the WSDP as no funding has been assigned to the specific project and first needs to go through the various approval processes and hence a collaboration between the various sectors is required in order for strategic projects to be appropriately prioritised. For the purposes of the WSDP a complete list of identified projects were formulated with the existing projects geodatabase utilised as basis and all additional projects emanating from the water and sewer masterplans for Bloemfontein, WCDM strategies and other applicable strategic documents were also listed in terms of preliminary demand horizons. Refer to Annexure A for a summary of the identified projects for both water and sanitation services as part of the process for completing the projects geodatabase.

- 4. As Mangaung Metropolitan Municipality is the Water Services Authority, the information of water and sewer infrastructure as managed by the Water Service Provider, Bloem Water, also had to be obtained and reviewed for inclusion in the greater MMM's planning. One of the most critical delays experienced is due to the lack of Bloem Water's cooperation to supply the necessary technical data required for this WSDP process. This issue has been escalated to other stakeholders and in particular, the Department of Water and Sanitation, in order to obtain external assistance in obtaining Bloem Water's cooperation in data sharing as this is in an ultimate requirement for the successful completion of the WSDP.
- 5. The process which follows the upload of the geodatabase is the verification process where each data element has to be assessed in terms of the quality and quantity of data and this step will only be finalised in a later phase.

# 2. CONCLUSIONS

In completing the planning and implementation time-frames of projects it is evident that the planning is very limited to projects where formal funding was already assigned- this implies that several projects have been identified but can't be included as part of the WSDP as no funding has been assigned to the specific project and first needs to go through the various approval processes and hence a collaboration between the various sectors is required in order for strategic projects to be appropriately prioritised.

For the purposes of the WSDP a complete list of identified projects were formulated with the existing projects geodatabase utilised as basis and all additional projects emanating from the water and sewer masterplans, WCDM strategies and other applicable strategic documents were also utilised to inform MMM's preliminary project planning. Refer to Annexure A for a summary of the identified projects for both water and sanitation services for Mangaung Metropolitan Municipality.

One of the key shortcomings identified is that Master Planning documents have only been prepared for Bloemfontein (sewer and water) and Thaba Nchu (water), neglecting future planning for Botshabelo, Wepener, Dewetsdorp, Vanstadensrus and Soutpan. In order for the entire Municipality's planning to be confirmative across the various towns/entities, the Master Planning for these towns have been identified as a gap which should ideally be addressed as part of the five-year WSDP process. Master Planning for these towns have thus been listed as separate projects which MMM will need to incorporate as part of their planning.

As Mangaung Metropolitan Municipality is the Water Services Authority, the information of water and sewer infrastructure as managed by the Water Service Provider, Bloem Water, also had to be obtained and reviewed for inclusion in the greater MMM's planning. One of the most critical delays experienced is due to the lack of Bloem Water's cooperation to supply the necessary technical data required for this WSDP process. This issue has been escalated to other stakeholders and in particular, the Department of Water and Sanitation, in order to obtain external assistance in obtaining Bloem Water's cooperation in data sharing as this is in an ultimate requirement for the successful completion of the WSDP.

Appendix A

Water Services Development Plan (WSDP)

Preliminary Project Planning List

	Project Info Source	Project Name	Project Description	Proje	ated Total ect Cost tl. VAT)
1	DWS: Projects GDB & MMM Current Projects and Budget & Drought Relief Fund Projects	Maselspoort Water Treatment Works (WTW) Upgrade & Refurbishment: Phase 1 (Conventional Treatment - to 60Ml/day)	Contract 1- Plant A: Filters, Washwater sump (Contract W1515)	R 3	34 407 500
2	DWS: Projects GDB & MMM Current Projects and Budget	Maselspoort Water Treatment Works (WTW) Upgrade & Refurbishment: Phase 2 (Advanced Treatment - to 70MI/day)	Centract 2 - Plant A: Interworks, Low Lift PS, Post Chlorination, Dzone, GAC Filter, Ultra Filtration, Access Road (W1515A) Centract 3 - Plant B: Bulk Elec, SCADA, Low Lift PS, Ozone, GAC Fitration, Ultra Filtration (W1515B) Cantract 4 - Plant A: Liquid Oxygen (Lou) Procurrent and Supply Centracts 5 - Plant A: Ganular Artivated Carlon (GAC) Procurents at a Supply	R 33	36 606 520
3	DWS: Projects GDB & MMM Current Projects and Budget	Maselspoort Water Treatment Works (WTW) Upgrade & Refurbishment: Phase 3 (Conventional Treatment - to 137MI/day)	Contract 6 - Plant A & B: Clarifiers, Pre-Chlorination, RGS Filters, Wash Water Sump	R 6	61 037 500
4	DWS: Projects GDB & MMM Current Projects and Budget	Maselspoort Water Treatment Works (WTW) Upgrade & Refurbishment: Phase 4 (Conventional Treatment - to 137Ml/day)	Contract 7 - Plant A & B: Ozone, GAC Filtration, Hydrogen Peroxide, Clearwater Tank, DAF, Sludge, Access Road Contract 8 - Plant A & B: Ozone, GAC Filtration, Ultra Filtration, DAF, Sludge, Post Chlorination	R 46	69 937 500
5	DWS: Projects GDB & MMM Current Projects and Budget DWS: Projects GDB & MMM Current	Maselspoort Re-Use Pipeline: Phase 1A	NE WWTW To Mockes Dam - 45MI/day	R 8	84 520 000
6	Projects and Budget DWS: Projects GDB & MMM Current	Maselspoort Re-Use Pipeline: Phase 1B	NE WWTW To Mockes Dam - 45MI/day		09 125 000
7	Projects and Budget DWS: Projects GDB	Maselspoort Re-Use Pipeline: Phase 2 Chlorination - Installation at Uitkyk (Bloemwater)	Bloemspruit WWTW to NE WWTW - 22.5Ml/day Chlorination - Installation at Uitkyk (Bloemwater)		36 880 000 3 000 000
10	DWS: Projects GDB DWS: Projects GDB	Chlorination - In line monitoring (Bloemwater) Mangaung RBIG Phase 4 to 4	Chlorination - In line monitoring (Bloernwater) Mangaung RBIOF PhJ Upgrade WWJUpgrade Maselspoort pumpstation, Ph2 Construct new bulk pipeline/new reservoir Naval Hill, Ph3 Upgrade pipeline to Longridge/JHP P/S/ New reservoir at Brandkop/Longridge, Ph4 Upgrade Nov-Transfer Scheme	R 40	1 300 000
11	DWS: Projects GDB	Replacement of asbestos pipes and drilling and equipping three new boreholes in Wepener	Upgrade Noto-Transfer Schme The project sull reliant the following: Replacing 11km of asbestori pipes to uPVC medium pressure pipelenine in Vegener - Drilling of three new boreholes that have been sited from a recent study and equipping them Uma a total of 1300m obeline. The project will enait the following: Replacing 5.5km of asbestos pipes to uPVC medium pressure pipelines - The project will enait the following: Replacing 5.5km of asbestos pipes to uPVC medium pressure pipelines -	R	7 656 000
12	DWS: Projects GDB	Replacement of asbestos pipes and equipping a borehole in Dewersdorp	equipping an existing borehole - Lying a total of 300m of pipeline from borehole to the existing 0.5MI water tank	R	4 416 500
	DWS: Projects GDB DWS: Projects GDB	Botshabelo 8ML Reservoir Rising main - Rehab/upgrade capacity of Welbedaght supply	Construction of an 8ML concrete reservoir, access road and control chamber. Steel Pipeline from Leeuwkop to Brandkop (33.7km)		48 000 00 66 800 00
15	DWS: Projects GDB DWS: Projects GDB	Naledi LM Borehole Development Morojaneng/Dewetsdorp: Elevated tank and interlinking pipeline	Construction of 3 new boreholes - Thapelong, Construction of 3 new boreholes - Dewetsdorp, Construction of 3 new boreholes - Weepener Morojaneng/Dewetsdorp: Elevated tank and interlinking pipeline	R	902 80
17	DWS: Projects GDB	Dewetsdorp:150 hholds due to dysfunctional Raw sewerage pump station	Dewetsdorp: 150 households due to dysfunctional Raw sewerage pump station (RSPS).	R	2 000 001
19	DWS: Projects GDB DWS: Projects GDB	Rustfontein: Pump set installation - Additional pump set Pump sets-Service of Welbedacht pump sets, switchgear	Pump set installation - Additional pump set at Rustfontein Pump sets - Service of Welbedacht pump sets and switchgear		10 960 000
	DWS: Projects GDB DWS: Projects GDB	Altitude valves - Service of all Bermad valves Dewetsdorp Scheme 2	Altitude valves - Service of all Bermad valves Construction of the connection line from the BloemWwater supply line inc power supply upgrade	R	8 000 000
	DWS: Projects GDB	Refurbishment of Sewer Systems: Refurbishment for a period of 3 years	Refurbishment of wwtw, Refurbishment of bulk sewer pipes, Refurbishment of Vista Park sewer		20 000 000
23	DWS: Projects GDB	Soutpan: Upgrading of bulk water supply and treatment works (297) - reservoir, water treatment plant, pumpisation	Soutpan: Upgrading of bulk water supply and treatment works (297) - reservoir, water treatment plant, pumpstation		22 010 016
24	WCDM Strategy	Water System Management: Integration and Optimisation - Telemetry and SCADA	Based on feasibility study report Intrusive investigation and renaic of the 20km x 2. Maselsonort feeder lines as per Dec 2015 proposed scope of		14 000 000
	MMM Drought Relief Fund Projects	Maselspoort Bloemfontein Rising Main Condition Assessment and Leak Detection and Repair	Intrusive investigation and repair of the 20km x 2. Maselspoort feeder lines as per Dec 2015 proposed scope of works.	R	1 100 000
	MMM Drought Relief Fund Projects	Old and New Arboretum Reservoir Leak Repair	Reservoir leak detection and sealant	_	
27	MMM Drought Relief Fund Projects MMM Drought Relief Fund Projects &	Hamilton Park Pump Station Refurbishment Bulk Supply Meters Audit, Verification Study, Calibration and Installation	Refurbishment of old pumpset and pipework (As per PED report) Study and Field Assessment to identify, locate bulk supply meter positions and installations		18 327 000
